

The Industrial Revolution

The Industrial Revolution began in Britain in the late 18th century and spread across Europe and North America during the 19th century. It marked the transition from agrarian, handicraft economies to manufacturing and industry.

Key inventions included the steam engine, the spinning jenny, and the power loom. The railway network expanded rapidly, connecting cities and enabling mass transport of goods and people for the first time.

World War I

World War I lasted from 1914 to 1918 and involved most of the world's great powers. It was triggered by the assassination of Archduke Franz Ferdinand of Austria-Hungary in Sarajevo on 28 June 1914.

The war introduced industrial-scale warfare: machine guns, poison gas, tanks, and aircraft were all used. The conflict resulted in approximately 20 million deaths and reshaped the political map of Europe.

The Space Race

The Space Race was a 20th-century competition between the United States and the Soviet Union for supremacy in spaceflight. It began with the Soviet launch of Sputnik 1 in October 1957, the first artificial satellite.

The US landed the first humans on the Moon on 20 July 1969 during the Apollo 11 mission. Neil Armstrong became the first person to walk on the Moon, followed by Buzz Aldrin. The Space Race accelerated advances in rocketry, computing, and telecommunications.
